16-BIT MULTIPLICATION

EXP NO: 7

**AIM:** To write an assembly language program to implement 16-bit multiplication using 8085 processor.

ALGORITHM:

1) Load the first data in HL pair.

2) Move content of HL pair to stack pointer.

3) Load the second data in HL pair and move it to DE.

4) Make H register as 00H and L register as 00H.

5) ADD HL pair and stack pointer.

6) Check for carry if carry increment it by 1 else move to next step.

7) Then move E to A and perform OR operation with accumulator and register D.

8) The value of operation is zero, then store the value else go to step 3.

PROGRAM:

```
LHLD 2050
      SPHL
      LHLD 2052
      XCHG
      LXI H,0000H
      LXI B,0000H
AGAIN: DAD SP
      JNC START
      INX B
      START: DCX D
      MOV A,E
      ORA D
      JNZ AGAIN
      SHLD 2054
      MOV L,C
      MOV H,B
      SHLD 2056
      HLT
```

INPUT\OUTPUT:

RESULT: Thus the program was executed successfully using 8085 processor simulator.
